

Weekly Report
13/04/2019 – 19/04/2019

This week, I told my colleague that we made a discussion that not submit to ChinaVIS2019. Anyway, we will follow our plan (ChinaVIS schedule) and can send you to see as soon as possible.

About the D2V (data to video) project. Now I am researching narrative visualization, storytelling, visual data story, time-based data visualizing, time series database, data visualization for journalism.

Now I'm detailing 2 papers, "More Than Telling a Story: Transforming Data into Visually Shared Stories" and "Narrative Visualization: Telling Stories with Data" and try to crystallize the idea from the data above for our project.

A preliminary core model is the storytelling process that has three components: exploring data, making a story, and telling a story. Next week I will try to produce a big picture of all I read based on this core model.

P.S. Process of transforming data into visually shared stories

- Explore data - finding insights
- Make a story - turning these insights into a narrative
- Tell a story - communicating this narrative to an audience
